**Forecast Discussion**

A few isolated showers and thunderstorms are possible mainly between 5pm and 10pm today as the sea breeze interacts with a weak upper-level disturbance that is forecast to move across the area this evening into tonight. Some isolated shower and thunderstorm activity is also possible during the afternoon hours tomorrow associated with the sea breeze. Down times and rainfall amounts for both days will be low.

**Severe / Tropical Weather Outlook**

No severe weather is expected across the area over the next 48 hours. There is no organized tropical activity in the Gulf of Mexico at this time.
